

```
1 require 'nokogiri'
2 require 'open-uri'
3
4 =begin
5 Ejercicio 8. Construir un Web Crawler (rastreador, araña, o robot) en Ruby capaz de
6 analizar
7 una página web concreta y que cree una base de datos con la información obtenida
8 =end
9
10 =begin
11 Usage: Gets source code and urls from a page
12 Name of method: getSoruceCode
13 Date of creation: 29/04/2021
14 Members: Roberto Jiménez y Alberto Pérez
15 Last modification: 06/05/2021
16 Parameters:
17   Entry:
18     - URL: Parameter of the program
19   Out:
20     - list with urls without parsing
21 =end
22
23 def getSourceCode url
24   # Gets source code from page
25   parsed_data = Nokogiri::HTML.parse(URI.open(url))
26   list = []
27   puts parsed_data.class
28
29   #Gets all urls from source code
30   tags = parsed_data.xpath("//a")
31   tags.each do |tag|
32     list.append("#{tag[:href]}\t#{tag.text}")
33   end
34   return list
35 end
36
37 =begin
38 Usage: Insert data received into a DB
39 Name of method: insertDB
40 Date of creation: 29/04/2021
41 Members: Roberto Jiménez y Alberto Pérez
42 Last modification: 06/05/2021
43 Parameters:
44   Entry:
45     - list: list with urls
46     - url: URL from page to analyze
47   Out:
48     - None, output is saved in DB
49 =end
50
51 def insertDB list, url
52   #Insert data into DB
53   `echo -n #{url} > aux.csv`
54   `echo " ~" >> aux.csv`
55   `echo #{list} >> aux.csv`
56   `sudo mysql --local-infile=1 -h "localhost" -u rober "-prober" < insertarBD.sql`
57 end
58
59 #Parse information with Grep command
60 list = getSourceCode ARGV[0]
```

```
60 parsedList = `echo #{list} | grep -E 'http[s]*://[a-zA-Z0-9./?@=%&:_#-]*'`  
61 finallist = parsedList.split(',')  
62 insertDB finallist, ARGV[0]  
63 for url in finallist  
64     puts url  
65 end  
66  
67
```
